Experience

INESC TEC - Institute for Systems and Computer Engineering, Technology and Science
2016–Present

R&D Engineer - Energy Analytics and Forecasting Unit

Projects:

- ***CORAL*** - *Sustainable Ocean Exploitation: Tools and Sensors* Project contributions:
  - Design and development of a multi-temporal energy management tool that acts based on predictive models and is capable of defining the best operational strategy for the energy storage/consumption of envisioned maritime exploratory processes.

  Supervisor(s):
  - Bernardo Marques Amaral Silva
  - Ricardo Jorge Gomes Sousa Bento Bessa

- ***INTEGRID*** - *Demonstration of INTElligent grid technologies for renewables INTEgration and INTEractive consumer participation enabling INTEroperable market solutions and INTErconnected stakeholders.*

  Project contributions:
  - Participated on the development of data harvesting algorithms to weather information (measurements and forecasts) from multiple weather providers.
  - Participated on the development of RESTful APIs for data ingestion.
  - Development of data visualization tools.
  - Development and integration of machine learning models for Medium Voltage loads and renewable energy sources (wind/solar).
  - Development and integration of machine learning models for Iberian Electricity Market (MIBEL) energy prices for day-ahead and intraday sessions.

  Supervisor(s):
  - Ricardo Jorge Gomes Sousa Bento Bessa

Education

FEUP - Faculdade de Engenharia da Universidade do Porto **2010–2016**

M.Sc. Degree in Electrical and Computer Science Engineering
Specialization in Renewable Energy

- Dissertation - Previsão de Variabilidade de Produção em Centrais Fotovoltáicas [1].
  - Classification: 19 (in a scale of 1 to 20)

[1] https://repositorio-aberto.up.pt/handle/10216/82786

Academia de Música de São João da Madeira **1998–2010**

Beginner - Advanced Musical Education & Piano Classes

Awards and Honors

EEM2016 - COMPLATT - Energy Price Forecast Competition **April 2017**

International competition[2] with the demanding exercise of forecasting the Iberian Electricity Market (MIBEL) hourly spot energy price up to 120 hours ahead. In a rolling basis fashion, forecasts were submitted over a period of 14 days. A weighted mean absolute error metric was used to evaluate the forecasts of each participant.

- Final Classification: 4^{th} place (44 participants at final stage)

INESC TEC BIP - "Fora de Série" / Limelight **May 2017**

Monthly award that honors collaborators for an exceptional contribution in his/her area of activity. More information available at BIP Bulletin INESC TEC [3].

Languages and Technologies

- Software: PSS/E, Power World, AutoCad, Microsoft Office, PyCharm, RStudio, pgAdmin III, DataStax DevCenter.
- Programming Languages: Python, JavaScript, MATLAB, LaTeX, C++, SQL
- Technologies: Pandas, NumPy, scikit-learn, statsmodels, TensorFlow, Keras, Matplotlib, Seaborn, Git, Dash, Plotly, Flask.
- Natural Languages: Portuguese and English proficient.
